Summary

Computer Science Graduate (GPA 88, 2025): B.Sc. from SCE with excellence in Data Structures, Algorithms, and Systems Programming — ready for a full-time software engineering role.

Full-Stack Developer: Hands-on experience building end-to-end web applications (React, Node.js) from requirements through production deployment, with clean, maintainable code.

AI-First Engineer: Daily user of Cursor and Claude Code; skilled at critically reviewing AI-generated output for correctness and scalability — not just accepting it.

Tech Skills

Languages: Python, Java, C++, JavaScript (ES6+), HTML5, CSS3.

Tools & AI Workflow: Expert use of Cursor and Claude Code; disciplined review of AI output for correctness and scalability. Proficient in Git, Docker, CI/CD, IntelliJ.

Frameworks & Libraries: React, Node.js, PyTorch, TensorFlow. Strong OOP, algorithms, and data structures applied to production-grade systems.

Professional Projects

Social Media Management Platform (React, Node.js — Full-Stack)

Built a full-stack responsive web application for a business client using React and Node.js. Delivered portfolio display and automated client lead-generation pipelines. Complete ownership from requirements to production deployment.

RoBERTa AI Text Classification (Python, NLP, Data Pipelines)

Designed a scalable text-classification pipeline using Python and RoBERTa to distinguish AI-generated from human-written text — covering data ingestion, fine-tuning, and evaluation end-to-end.

Deep Learning for Seizure Detection (Final Project, PyTorch)

Owned the full architecture for EEG signal classification. Implemented and optimised SNN and CNN+LSTM models in PyTorch, focusing on scalability and real-world production readiness.

BFS Pathfinding Client-Server Application (C++, Multithreading)

Multithreaded C++ client-server app for BFS shortest-path computation with caching to optimise throughput under concurrent load.

Military Service

Strategic Communication Platoon Commander (Sergeant-Major): Led technical teams operating complex communication infrastructures in the 'Hoshen' unit. Delivered critical outcomes under pressure with full end-to-end operational ownership.

Education

B.Sc. in Computer Science, SCE Academic College of Engineering (2022–2025) — GPA 88. Key Courses: Data Structures (95), Computer Systems Architecture (96), Systems Programming (93), Machine Learning (86).

Employment & Volunteering

Instructor — Appleseeds Foundation (2026–Present): Teaching high school students topics including building AI agents, web development, cybersecurity, and more.

Logistics Team Leader — HP Indigo (2019–2021): Led a team in high-scale ink production logistics, ensuring operational efficiency under pressure.

Perach Mentor (2024–Present): Academic and personal mentorship to students.
