Summary

Full-Stack Developer: Full ownership of end-to-end web applications, from requirements through production deployment, using React, Node.js, Express, and Supabase. Daily user of Cursor, Claude Code, and Antigravity, skilled at critically reviewing AI-generated output rather than just accepting it.

Tech Skills

Languages: Python, Java, C++, JavaScript (ES6+), TypeScript, HTML5, CSS3.

Frameworks & Libraries: React, Node.js, Express, Supabase, Vercel, PostgreSQL, Redis, Docker, AWS Lambda, S3. Strong OOP, algorithms, and data structures applied to production-grade systems.

Tools & AI Workflow: Expert use of Cursor, Claude Code, and Antigravity; disciplined review of AI output for correctness and scalability. Proficient in Git, GitHub, and IntelliJ.

Professional Projects

Social Media Management Platform (React, TypeScript, Node.js, Express, Supabase - Full-Stack) | [Live Site](#)

Built a bilingual (Hebrew/English, RTL/LTR) marketing site for a social media management business, from requirements through production deployment. Built a Node.js/Express backend with a token-protected admin API for the client to manage the site's own portfolio: uploading and reordering images/video by category, backed by Supabase storage. Complete ownership of frontend, backend, and deployment.

URL Shortener (React, TypeScript, Python, PostgreSQL, Redis, Docker - Full-Stack) | [Live Site](#)

Built a full-stack URL shortener with a React/TypeScript frontend and a Python backend, using PostgreSQL for storage and Redis for caching. Containerized with Docker and Docker Compose and deployed to production.

Wedding Invitation Web App (React, TypeScript, Vite) - Creative Project

A personal creative project built largely with Claude Code: a cinematic, animation-driven single-page wedding invitation with an envelope-opening intro, parallax scroll, a live countdown, and a photo gallery, fully in Hebrew (RTL). Used Framer Motion for transitions and Tailwind CSS for styling. Next step: an RSVP system with a Supabase-backed form and admin view.

Academic ML Projects (Python, PyTorch)

Two coursework projects applying deep learning to classification problems: a RoBERTa-based pipeline distinguishing AI-generated from human-written text, and SNN/CNN+LSTM models for EEG-based seizure detection, both covering data pipeline, training, and evaluation.

Military Service

Strategic Communication Platoon Commander (Sergeant-Major): Led technical teams operating complex communication infrastructures in the 'Hoshen' unit. Delivered critical outcomes under pressure with full end-to-end operational ownership.

Education

B.Sc. in Computer Science, SCE Academic College of Engineering (2022–2025) - GPA 88. Key Courses: Data Structures (95), Computer Systems Architecture (96), Systems Programming (93), Machine Learning (86), Deep Learning (92).

Employment & Volunteering

Instructor - Appleseeds Foundation (2026–Present): Teaches high schoolers AI agents, web development, and cybersecurity.

Logistics Team Leader - HP Indigo (2019–2021): Led a team in high-scale ink production logistics.

Perach Mentor (2024–Present): Academic and personal mentorship to students.
